

Each exam has a category for every topic in the body-of-knowledge as defined by ASQ. Configure your own exam by choosing the number of question and the categories on the exam. The exam is timed (with a pause button in case you are interrupted), and your score is tabulated by category to expose weaknesses.

The screenshot shows a window titled "Examination Configuration" with a menu bar containing "File" and "Help". The window is divided into several sections:

- Select Topics:** A list of seven topics with checkboxes. "Organizational Functions", "Project Management", and "Training & Education" are checked. "All Categories" is also present at the bottom of this section.
- Select Exam Length:** A list of six options with radio buttons. "100 Questions" is selected.
- Question Source Option:** A list of two options with radio buttons. "Include Primer Questions" is selected.
- Begin Exam:** A large button at the bottom right of the window.

Section	Option	Selected
Select Topics	Quality Standards	<input type="checkbox"/>
	Organizational Functions	<input checked="" type="checkbox"/>
	Strategic Quality Planning	<input type="checkbox"/>
